

WHAT IS CLAIMED IS:

1. A system for providing real-time search information, comprising:
 - a mobile terminal for transmitting a request for detailed information about multimedia data and outputting detailed information received in response to the request;
 - a search system having an information database for storing relevant information about multimedia data, determining if information in the information database matches multimedia data, about which detailed information has been requested, requesting detailed information corresponding to the matching information, if any, and when the requested detailed information is received, transmitting the received detailed information to said mobile terminal; and
 - a plurality of information providing servers for collecting detailed information corresponding to the matching information upon receiving a request for the detailed information from said search system, and sending the collected information to said search system.
2. The system according to claim 1, wherein said mobile terminal sends at least one of classification information and keyword information, when sending to said search system a request for detailed information about the multimedia data .
3. The system according to claim 2, wherein said multimedia data includes at least one of image, sound and text information.
4. The system according to claim 3, wherein said image information stored in said information database includes a plurality of images of an object photographed at various angles and positions.
5. The system according to claim 4, wherein said image information stored in said information database includes a plurality of images of an object which show the

changes of the object with lapse of time.

6. The system according to claim 1, wherein said search system is a base station.

5

7. The system according to claim 1, wherein said search system sends a request for detailed information corresponding to said matching information to a server which has the most sufficient matching information, among said plurality of information providing servers.

10

8. The system according to claim 1, wherein said search system sends the detailed information received from at least one of the plurality of information providing servers to said mobile terminal, together with said matching information.

15

9. A method for providing real-time search information from a system for providing real-time search information having a mobile terminal, a search system for managing a wireless communication network for communication through the mobile terminal, and an information providing server for collecting information requested from the search system and providing the collected information to the search system,

20 said method comprising the steps of:

a) requesting detailed information about multimedia data;

b) comparing said multimedia data with relevant information stored in an information database of said search system and determining if information in the information database matches said multimedia data;

25

c) when said search system detects matching information, sending a request for detailed information corresponding to the matching information;

d) when an information providing server receives a request for detailed information, collecting detailed information corresponding to the matching information and sending the collected detailed information to said search system;

30

e) when the detailed information corresponding to the matching information is

received from said information providing server, sending the received detailed information to said mobile terminal; and

f) when said mobile terminal receives the requested detailed information, outputting the detailed information.

5

10. The method according to claim 9, wherein step a) further comprises the step of sending at least one of classification information and keyword information, when sending a request for detailed information about the multimedia data to said search system.

10

11. The method according to claim 10, wherein said multimedia data includes at least one of image, sound and text information.

12. The method according to claim 11, wherein said image information stored
15 in said information database includes a plurality of images of an object photographed at various angles and positions.

13. The method according to claim 12, wherein said image information stored
in said information database includes a plurality of images of an object which show
20 the changes of the object with lapse of time.

14. The method according to claim 9, wherein said search system is a base station.

25 15. The method according to claim 9, wherein said information providing server consists of a plurality of information providing servers, and step c) further comprises the step of sending a request for detailed information corresponding to said matching information to a server having the greatest amount of matching information, among said plurality of information providing servers.

30

16. The method according to claim 9, wherein step e) further comprises the step of sending the detailed information received from one information providing server to said mobile terminal, together with said matching information detected at step b).

5
